RANJAULY HEALTH CARE PVT. LTD.

COMPANY INFORMATION

NUTRACEUTICALS: New Engine of Growth

- Nutraceuticals, in broad, are food or part of food playing a significant role in modifying and maintaining normal physiological function that maintains healthy human beings
- People have seen a massive change in their lifestyle over the past century. The new lifestyle adopted by people today has changed the basic food habits of the latter. Consumption of the junk food has increased manifold leading to a number of diseases caused due to improper nutrition
- With the advent of industrialization, the time devoted to self-care has reduced over the period of time, especially in India.
- With the burgeoning reliance on fast foods, the body's daily intake of essential vitamins and minerals is not being fulfilled
- Moreover, there has been a big shift from curative healthcare to preventive healthcare
- Nutraceuticals help in combating some of the major health problems of the century like obesity, cardiovascular diseases, cancer, osteoporosis, arthritis, diabetes, cholesterol, etc.
- As a result of all the above factors, masses have started to consume many fortified foods, nutritional supplements. The products that are currently in use in India are single vitamin capsules, multivitamin capsules, fortified protein diet, anti-oxidants and prebiotics & probiotics. However, there are many other product ranges in Nutraceuticals that the Indian market is yet to explore
- So much is the reliance on these Nutraceutical products in the US that the dosage units consumed is high even compared with the Pharmaceutical industry. This is because one takes curative medicines only when one falls sick, say 10 or 15 days a year as an average. However, nutraceuticals are consumed every day of the year as they are meant to keep one from falling sick.
- While India leads in the Pharmaceutical market the world over, the focus on Nutraceutical has come only in the last 5 years.
- Every big or small pharmaceutical company in India have introduced Nutraceutical segment of products in their portfolio. They are taking advantage of their existing distribution channel to promote those products.
- Many other companies have evolved to deal in Nutraceuticals with other models of marketing (Eg: Amway uses pyramid marketing) The nutraceutical industry is expected to reach to about USD 2.2 billion by the year 2030 in India growing at CAR of 17% The challenge to the current nutraceutical market is the absence of quality norms, standardized manufacturing process, quality inspections and reliance

TABLETS

The granulation line has been set up in a way so as to manufacture over 30 million tablets a month.

- **GRANULATION SECTION** Granulation section has RMG, FBD, multimill, sifter and octagonal blender for manufacturing and drying of granules. 120 kg granulation line has been set up with machines from Bombay Engineering Works. A separate paste kettle room is there with steam based paste kettle to manufacture the slurry.

Operation of the critical machines is through touch screen PLC based type. A separate granulation quarantine room is available

for storage of manufactured granules during their testing period

- **COMPRESSION** A double head Accura 27 station D tooling machine is installed for compression of tablets. The compression machine is fitted with de-duster and dust-extractors for impeccable finishing of compressed tablets
- **COATING** A 36" coating pan is installed for coating of tablets. The speciality of the coating pan is that the solution spraying is through peristaltic pump enabling uniform coating thickness over the tablet. Moreover, the coating pan is connected with a separate inlet chamber and exhaust chamber (with wet scrubber) enabling complete cleanliness of the room and the exhaust air. A separate quarantine room is there for storage of ready to pack tablets
- **PACKING** All possible packing options are available vis blister, alu-alu, strip, bottle. Accurate's fully automatic 240 Plus blister machine is available for blister pack. A double track Alu-Alu pack machined is available for alu-alu packing. Satellite's six track strip packing is available for strip packing. All the packing machines are connected with a conveyor belt to ensure

thorough inspection and secondary packing of the said products

HARD GELATIN CAPSULES

Manufacturing facility for hard gelatin capsules/ dry filled capsules (DFC) enables to manufacture DFC of any size. An auto loader is there to enhance the production capacity of DFC. The room is

designed in a manner that if need be a fully automatic capsule filling machine can easily be installed.

SOFT GELATIN CAPSULES Soft Gelatin capsules are considered to be one of the most convenient oral dosage forms. Especially for encapsulation of vitamins, anti-oxidants which are in oil or paste kind of preparation,

SOFT GELATIN CAPSULES

provide a good viability. The quality of the soft gel capsules is considered to be better

because they are hermetically sealed. The large production capacity encapsulation machine of Arbes Tools Pvt. Ltd. has been installed in the plant. Currently one line of soft gelatin section, with production capacity of over 4 lacs capsules, is available. Provision has been made for adding an additional line. The soft gelatin section has separate rooms for melting of gelatin, manufacturing of medicament, encapsulation and drying. One of the critical processes to ensure the quality and uniformity is the drying of the encapsulated soft gel capsules.

TOTAL QUALITY MANAGEMENT

We have ensured the best infrastructure facility not only in terms of the machines but also in terms of the utilities we use. Highlights of the same are as follows:

UTILITIES

Water

Purified Water is the single most essential ingredient in majority of the dosage forms. At AQUA TECH we treat the Raw water through a series of steps which included pre-filtration, a first pass CRO, a second pass CSRO and finally a CSEDl system to get USP grade purified water. The water thus obtained is the purest form of water as per the guidelines available across the world. The input

and output water are periodically checked for any deviation from the standards.

COMPRESSED AIR

Compressed air is required for drying of vessels, drying of granules in oral tablet section and for functioning of many of the machines. The compressor installed in the plant is of the latest technology from the house of Atlas Corpco with the best quality filters installed. A back-up

compressor is also installed to prevent any downtime because of maintenance purposes.

Air (AIR HANDLING UNIT)

The production area is completely separated from the external environment and the administrative area. We maintain clean room conditions in the production area with installation of HEPA Filters, AHU, FDV system and dehumidifiers wherever essential. Strict temperature control is maintained in the areas requiring temperature control and for the manufacturing of products that are temperature

sensitive.

STEAM

A diesel based steam boiler is installed at the plant for generation of high quality of steam for the functioning of process equipment. We have kept sugar melting tank, RMG, paste kettle, etc. as steam operated so that the desired temperature is achieved immediately. Sufficient number of

steam traps and valves has been deployed to prevent any unforeseen incident relating to this.

PRODUCT RANGE

Nutraceuticals comprises of dietary supplements taken for healthy development of the body. They aid in maintaining normal body functions and the overall growth of an individual. We have manufacturing facility to manufacture tablets, hard gel capsules, soft gel capsule, powder, sachets and oral liquids to cater to any product in any of the following product category. Beyond this also any of your product requirements can easily be manufactured at our premises. In short if there is

any nutraceutical product that you can think of, we can manufacture it.

Broadly the product range can be categorized into following category

- **Vitamins** Multivitamins & Multiminerals (and anti-oxidants)
- Prebiotics & Probiotics
- **Fortified Food (Protein & other derivatives)**

Vitamins

Vitamins are organic compounds required in limited amounts for healthy functioning of the body. Thirteen vitamins are universally recognized at present. Traditionally food has been the only source of vitamins for the body. However, owing to the changing lifestyle pattern and change in food habits, there may be deficiency of some or the other vitamins. It is estimated that over 80% of the world population may have deficiency of some or the other vitamin. Different vitamins have been associated with proper functioning of different part of the body. Single vitamin tablets/ capsules are given for achieving a particular result For example: Vit A is given for hair growth and for fighting wrinkles, etc.; Vit C tablets are given for its antioxidant activity; Vit B12 capsules are given to elderly people as supplement for fatigue, memory loss and weakness; Vit B1 Tablets/ Capsules are given to promote the nervous system; Vit B2 Capsule is given to aid the treatment of migraine patients, Vit D3

to aid treatment of osteoporosis and other bone related disorders, Vit B, (biotin) for hairfall, etc.

Multivitamins and Multiminerals (and anti-oxidants)

Various nutrients in terms of microminerals and macrominerals are essential for the body to perform physiological functions. While all the nutrients are generally available with food in the required quantity there are many minerals that are area specific deficient (for example Iodine deficiency is prominent in hilly areas and in Africa) or many minerals that gets depleted from water because of the purification methods (for example RO water systems removed majority of the minerals from water). Because of the lifestyle and food habits, supplementation of vitamins and minerals has become a very important factor. We are not the only ones who believe that supplementation is necessary to fill in the nutritional gap. The American medical association is advising all adults to take atleast one multivitamin pill a day. Harvard School of public health advices everyone to take a multivitamin daily as an inexpensive nutrition insurance policy. To further enhance the benefits of multivitamins and multiminerals, many of the formulations have an added anti-oxidant like ginseng, lycopene, omega-3-fatty acid, grape seed extract, green tea extract, Co-enzyme Q10, etc. to delay the oxidation of cells in the body. The said multivitamins and multiminerals (with anti-oxidants) are available in numerous possible combinations in tablet, hard gel capsule, soft gel capsule, syrup and drops. We can manufacture your exact composition or can suggest many compositions to suit the exact requirement.

carbonate folic acid and Vit B12, Ferrous ascorbate with folic acid zinc and Vit B12, DHA related combinations, Glucosamine with chondrin and MSM, pregabalin with Vit B12, gabapentin with Vit B12,

Vit B-complex with L-Lysine, Astaxanthin with Phospholipids etc.

Prebiotics and Probiotics

Bacteria and human cells live in complete synergy in a healthy body. It is estimated that the number of bacterial cells in the body is more than the human cells. Both together constitute the human microbiome. Many of the microbiota is known to be useful to the human host; however the role of most resident microorganisms is not well understood. The Human Microbiome Project took on the project of sequencing the genome of the human microbiota, focussing particularly on the microbiota that normally inhabit the skin, mouth, nose, digestive tract, and vagina. The initial results were published in the year 2012 giving rise to a whole new field by the name of Prebiotics (the microorganisms that are helpful to the human body) and probiotics (the food of this microorganisms). At Brukem Lifecare we have various products in this segment in hard gel capsule/ sachet form. Various combinations are available depending on the intended area of usage viz. for intestine (gut) health, vaginal health, immunity, skin health (urticarial/ acne). Moreover, during treatment of infections antibiotics are prescribed which eliminate the bacteria in the body (pathogens as well as useful bacteria). To overcome the side effects of antibiotics, prebiotics and probiotics are recommended. Various strains of bacteria have proven to be useful for the human body. Examples of few of these are Lactic acid bacillus, Lactobacillus Reuteri, Lactobacillus

Rhamnosus, Bifidobacterium bifidum, Bifidobacterium Longum, Bifidobacterium Infantis, Saccharomyces Boulardii, etc.

Fortified Food (Protein & other derivatives)

Protein is considered to be the building block of the body which performs a vast array of functions including and not limiting to muscle build up. It is one of the most (if not the most) important component of the diet. During many of the life stages like growing children, infants, pregnant ladies, lactating mothers, malnourished adult, old age, etc. warrant an additional boost of protein with some supplements. Protein is available in powder form with various dosage types (bulk weight, individual dosage sachet). Moreover, protein powder can be customized for a diabetic or calorie conscious person with sugar free options. Protein powder for pregnant ladies and lactating mother has an additional boost of DHA and Lycopene which are necessary for healthy mental growth of the foetus/ infant. Protein supplements can be made in various flavoured options to suite the taste pallet of an individual. The currently more dominant options include chocolate, vanilla, American

ice-cream, mango, etc. Colostrum is another fortified food that is used as supplement to boost immunity and improve muscle gain when working out. It is considered to be the nature's first immune defence. Colostrum is nothing but a mother's milk that is produced in the latter stages of pregnancy and immediately after

birth of the offspring. It is available in capsule and powder form.

In a nutshell, we can manufacture any Nutraceutical product that you can think of. You can have your fixed set of composition or you can select any of our standard set of compositions for any of the above mentioned category

FUTURE PROJECTS

The business group is also coming up with a state of the art manufacturing plant for manufacturing of Pharmaceuticals Products under the name of Edkem Pharmaceuticals Pvt Ltd. The plant is being constructed alongside Brukem Lifecare and will comply with the guidelines laid down by all the national and international agencies including and not limiting to PICS, USDA, MHRA, WHO, GMP,

etc.

Plant 1: General Section

The General section will have manufacturing facilities for Tablets (all tablet types including bilayer, effervescent, chewable, sublingual, etc.), Hard Gelatin Capsules (powders, pellets, caplets), Oral Liquid (2500 lts batch size plant) and Ointments (500 kg batch size plant). The machines in the plant

will be completely automated with all latest sophistication in each of the machines. The construction of the plant is going on in full swing and is slated to commence operations in

October 2026.

We welcome you to visit our manufacturing premises to know more about the systems and processes that we follow and to discuss any of your products

PRODUCT LIST

S. No.	Brand Name	Composition	Dosage Form	Pack Size
1.	RAN CAL	Each Film coated tablets contains: Calcium 500MG, Vitamin D3 250 IU	Tablets	10 x10 Tablets
2.	RAN VIT	Multivitamin with Minerals Tablets	Tablets	10 x10 Tablets
3.	RAN LAC POWDER	Lactic Acid Bacillus	Sachets	10 x1 gm Sachets
4.	RAN LAC QIK	Each 1 gm sachets contain: Lyophilized Saccharomyces boulardii & Lactic Acid Bacillus 120 POWDER	Sachets	10 x 1 gm Sachets
5.	RANLAC PLUS POWDER	Each Sachet of 1 gm Powder contains: Probiotics: Not less than 1.25 billion cells Lactobacillus Acidophilus Lactobacillus Rhamnoses Bifidobacterium Longum Bacillus Coagulants Saccharomyces boulardii Excipients qs	Sachets	10 x 1 gm Sachets
6.	RANLAC- DT	Each uncoated tablets contains: Lactic Acid Bacillus 120 and Zinc Sulphate Monohydrate 10mg	Tablets	10x10 Tablets
7.	RANOTA POWDER	Each 1 gm sachets contain: Saccharomyces boulardii	Sachets	10 x1 gm Sachets
8.	RANOLAC PLUS CAPSULE	Lactobacillus Acidophilus Lactobacillus Rhamnoses Bifidobacterium Longum Bacillus Coagulants Saccharomyces boulardii----:250 mg	Capsules	10 x10 Capsules
9.	RANOLAC DRY SYRUP	5 ml contains: Lactic Acid Bacillus 120x10 6	Dry Syrup	24 gm Powder for 60 ml Syrup
10.	RANOLAC DS TABLETS	Each Uncoated tablets contains: Lactic Acid Bacillus Tablets (120 M)	Tablets	20X15 Tablets
11.	RAN WHEY PROTEIN	Per 35 g Contains Protein 24 g	Powder	200g
12.	RAN ENERGY POWDER	L-arginine, Caffeine and Proanthocyanidins	Sachets	5g Sachets
